

## Di-O-Matic Announces Immediate Availability of Morph ToolKit version 1.5

**Montreal, Qc – October 6th, 2003** – Di-O-Matic, a leading developer of character animation software, announced today immediate availability of Morph ToolKit version 1.5 for 3ds max, a major point release in the company's award-winning character animation product line.

Morph Toolkit v1.5 is a series of very handy tools that are designed to help creating morph targets and morph animation. The tools within Morph ToolKit don't rely on any morphing systems, so they can be used with the built-in morpher, Morph-O-Matic or any other morphing system. The ability to automatically mirror vertices from one side of an object to the other as well as linking objects to vertices make it the perfect choice for faster creation of any kind of morph target deformations and animations.

"Our production schedule had budgeted 4 days per head to complete more than 30 morph targets that were needed for each of our highly detailed and realistic characters. With MorphToolKit I was able to bring that down to less than a day and a half !" explains Chris Harvey, Freelance Animator and Instructor.

Morph ToolKit v1.5 has been enhanced with new features that make it easier for modelers and technical director to create and animate morph targets in their production environment. Enhancements include:

- New Float licensing scheme: Morph ToolKit now uses the ALPServer, the new floating license scheme recently developed by Di-O-Matic in concert with Mankua
- New detach mechanism added in Attach-O-Matic
- Treshold to find mirror points is now Unit-based in Copy-O-Matic
- More MAXScript commands for Link-O-Matic and Attach-O-Matic
